

Ebola virus - fact or fake?

Ebola virus - fact or fake?

Valued viewers, the pharmaceutical company Roche professes to have developed a fast test for verifying the contraction of the Ebola virus and is pressing to have it approved. Every layman as well as the expert in the field of medicine will ask himself however how reliable and significant are such quick-tests for viral infections? With this question we welcome you back to our media commentary: "Ebola virus - fact or fake?" Dr. Klaus Koehnlein, author of the book "Virus madness" compares modern research on viruses to the Yeti-myth. Dr. Koehnlein writes: "With both (virus research and the "Big-foot"-myth) it is claimed that they exist, although no one has seen them - viruses, which cause sicknesses, on the one hand and on the other hand, an ape-like creature, supposedly two to three meters tall and weighing about 200 kilograms. Just as with "Big-foot", where finding and describing a 43 centimeter-long footprint has to serve as indirect proof that he exists, in the same way in virus research indirect clues have to serve as a substitute for real images with complete DNA substance and outer wall. Bacteria and fungus can be seen with a common light microscope. However to directly prove the presence of a virus, even an electron-microscope fails. This is why, over time virus research moved away from direct proofs of viruses. This is why fourteen renowned virologists of "the old guard" felt drawn to make an appeal on the younger generation of technology-besotted colleagues for seriousness in research. This appeal was also published then in the 2001, in the magazine "Science". Obviously it was not heard however as we can see by Dr. Koehnlein's Swine-flu illustration from 2009. The information flyer from the German federal government concerning Swine-flu allegedly contained electron-microscope photos of the new influenza virus - H1N1. The flyer cites no sources and the authors at the Robert Koch Institute are unable to provide the information as to from which scientific research publication these photos were supposedly taken. Is the situation better with the Ebola virus? Michael Leitner, a medical journalist wrote concerning this: "The question is not where Ebola originated or was possibly produced but, if there are real proofs that the Ebola virus exists. I have not found any such thing." Michael Leitner draws the conclusion: "This is the scheme used to spread viruses today: EVERY epidemic that has been in the big media headlines was a TEST epidemic. It is not a new virus spreading, but a virus-test, which supposedly proves the existence of a terribly dangerous new disease". Ladies and gentlemen, we hope these counter-voices were helpful and wish you a good evening!
